Mixed model and attained optimum · §2
Branch L: quadratic margin
Theorem 3.1: rounding
Corollary 3.5: loss covered
Branch C: critical regime
Proposition 4.3: localization
Theorem 5.0: construction
Theorem B: $c_4(G) \le M(n)$
for all sufficiently large orders
Retained root and accounts
§5.4 → §6.5
Graph and partition stability
Theorem A: $c_4(G) \le M(n) + b$
for every order · §6.3
