

## E8 — audit of the audit/package: NOT RUN (beyond hash level)

**Status: INCONCLUSIVE.** Request §1.2 defers reading internal/editorial verdicts, derivations and test conclusions until the independent first pass of E1/E3, E7, E2, E5 and E6 is recorded; E6 (visual QA) and E5 (Certo item) were not completed, and after the E7 blocker new work was stopped (§4.2). Therefore the internal G0–G8 / B01–B10 results, the 19 part archives vs sidecars and the report/script/raw-result correspondence were **not** examined.

**Done (hash level only, E0):** the internal-audit ZIP 1911f29e... matches the mandate; CRC valid; 2 480 members, no traversal, duplicates, symlinks, encryption, comments or unaccounted bytes; member hashes recorded in E0/E0\_intake\_full.json and unchanged at the final recheck.

**Repository-documentation note (OBSERVATION, not an E8 verdict):** `git status` of the working tree on 2026-09-28 11:27 shows uncommitted author modifications to several README/CITATION files; they were not read (after-first-pass/navigation scope) and are not attributed to this audit.
