

Informe de puerta E6 — run_v1.22_r3 (Paper IV v1.22-r3)

Veredicto actual: **PASS_WITH_FINDINGS (NEW-05)**. Evidencia: 20_EVIDENCE/E6/. Auditor: Claude Opus 5.5, misma sesión que las ejecuciones anteriores; no se ejecutó Lean.

E6 — NEW-04 and parity (run_v1.22_r3)

Method (independent of the editor's scripts)

- **Diff and protected content.** `10_SCRIPTS/e6_r3_delta.py` produces `E6_R3_DELTA.json` and the auditor's `diffs auditor_diff_{en,es}_{md,tex}.diff`.
 - Paragraphs: 503 → 503 in each language; **5 changed paragraph groups per language**.
 - Unchanged in EN and ES: 237 displays, 1989 inline formulas, code blocks, 146 tags, 159 table rows, headings, image references and the whole bibliography.
 - Changed paragraphs contain no inline mathematics in either r2 or r3.
 - Code spans: 331 → 333. No span is removed; the two added are `run_v1.22_r1` and `run_v1.22_r2` (audit-run names, not Lean identifiers).
 - TeX: preamble identical; 10 changed lines per language; displays and equation environments identical.
 - The body of the editor's `CHANGES_{en,es}.diff` equals the auditor's diff byte for byte. Only the two header lines (file names) differ.
- **ES bold leads.** The single difference among bold paragraph leads is the A.2 lead, «Alcance de la demostración escrita» → «Alcance de la prueba escrita». It sits inside a changed paragraph and is not a section heading.
- **PDF corresponds to TeX.**
 - EN r3: 72 pages, xdvipdfmx 2026-10-01 13:56 UTC. ES r3: 73 pages, 13:54 UTC.
 - Every token-diff region between the r2 and r3 PDF texts (EN 56, ES 63) is explained by the changed MD paragraphs, with 0 unexplained regions.
- **Raster (72 dpi).** EN changes on pp. 1, 33, 39, 40, 64; ES on pp. 1–6, 34–36, 39, 40, 66. This equals `ARTIFACT_CHECKS.json`.
- **Visual inspection** (`PAGE_INSPECTION_LOG.csv`, 145/145).
 - Every page was seen on 4-up sheets at 70 dpi (`overview/`).
 - The pages with changes or shifts were also inspected in r2|r3 side-by-side comparisons at 105 dpi (`cmp/`): ES 36, 39, 40, 66 and shifts.
 - For pages whose comparison images could not be confirmed, the rows were re-logged from displayed sheets (`CORRECTIONS C4-01`).
 - The ES shift (pp. 1–6, 34–36) is absorbed by white space before Figure 1 and Figure 4, so pp. 7–33 and 37+ are raster-identical. No content is lost or duplicated, and page counts are unchanged.

NEW-04 — the five documentary paragraphs per language

All ten paragraphs (five EN, five ES) are quoted in full before/after in `E6_R3_DELTA.json` (changed).

Place	r2 (stale)	r3	Check
Front matter (Status/Estado)	«revisión que responde a la revalidación de 1.21 ... INCONCLUSIVE ... requieren su propia revisión»	r2 concluded PASS_WITH_OBSERVATIONS on 1 Oct 2026; accepted C.3 and the seven A.2 rows; no open finding ≥ MINOR; Lean cut unchanged with formal PASS inherited; r3 updates the status and its delta awaits verification; no new build	Correct. It does not invent a clean PASS and it states the observations.
§7 «Audit status / Estado de auditoría»	«v1.22 ... esperan revalidación»	v1.2 and v1.21 INCONCLUSIVE; C.3 accepted in run_v1.22_r1; r2 PASS_WITH_OBSERVATIONS, observations retained; no recompilation; r3 claims no verdict for its own changes	Correct, and the historical INCONCLUSIVE verdicts are kept.
A.1, note after Table 7	«La comparación ampliada de C.3 en v1.22 espera una nueva revisión»	evidence revalidated without recompilation; r2 records C.3 and distinguishes individual semantic rows from coverage by the component ledger and compilation	Correct. This is consistent with run_v1.22_r2 §4.1.

A.2 «Scope of the written proof / Alcance de la prueba escrita»	«aceptó seis de las siete filas ... requiere revisión»	the seven rows are ACCEPTABLE SUMMARY per r2; R-01 limit retained; build ≠ exposition ≠ peer review	Correct. The A.2 table header «Derivation to review.../Derivación por revisar...» is unchanged because table rows are protected. It reads as guidance for a referee and is acceptable as is.
F.4, closing paragraph	«Una nueva auditoría todavía debe comprobar...»	the E.4/F.3/F.5 checks are consolidated in r2, with its scope; compilation is not a substitute for review	Correct. run_v1.2_r1 E2 §5.1 rederived E.4 block by block, F.3a and F.5 cases.

C.3 and the seven A.2 rows are no longer presented as pending in either language. No clean PASS is invented. EN/ES content parity holds.

NEW-04: CLOSED in r3. The paragraphs are dated records of r2; the verdict on r3 is this report. That is not an inconsistency and does not require editing the manuscript retroactively (mandate §2).

NEW-05 — ES terminology in the r3 rewrites (MINOR)

The new ES text of the A.2 and F.4 paragraphs introduces terms that differ from the established terminology of the ES manuscript:

- «la **programación numérica** de C.3» (A.2, MD l.1355). Elsewhere the text says «calendario numérico» (l.1599), the C.3 heading is «Un **calendario** explícito y su propagación», and r2 itself said «el calendario numérico en C.3».
- «la cota adaptada **con muestra fijada**» (F.4, l.2356). F.5 says «Ensamblaje de la cota adaptada para **muestras con anclajes**» (l.2403), and Table 10 says «Cota de muestra con anclajes» (l.2398); r2 said «muestras con anclajes».
- (Checked and *not* a finding: «conteos de normalización» replaces r2's «cuentas de normalización», but «Conteos» is established in the A.2 table, as in «Conteos de descarte».)

These are not mathematical changes, and EN/ES parity of meaning holds. However, they break the terminological consistency the series maintains (compare X-04 and X-15). A reader of the A.2 and F.4 notes might not identify the named objects.

Action before publication: restore «calendario numérico» (A.2) and «muestras con anclajes» (F.4) in the ES text, then repeat the ES identity and E6 check.

E6 verdict (r3)

PASS_WITH_FINDINGS.

- NEW-04 is closed; the protected content is identical; each PDF corresponds to its TeX; all 145 pages were inspected.
- NEW-05 (MINOR, ES terminology) remains open, with a small pre-publication correction.
